

**SREE CHITHRA TIRUNAL INSTITUTE FOR MEDICAL
SCIENCES AND TECHNOLOGY (SCTIMST)**

(AN INSTITUTE OF NATIONAL IMPORTANCE – GOVT. OF INDIA)

THIRUVANANTHAPURAM, KERALA, INDIA - 695011

WORK BOOK

LIST OF PROCEDURES DONE

DIPLOMA IN OPERATION THEATRE TECHNOLOGY

BY

ARCHANA S NAIR

Emp. Code 6909

YEAR OF STUDY – 2016 TO 2017

CERTIFICATE

*I **ARCHANA S NAIR** hereby declare that I have actually performed all the procedure listed/carried out.*

Place: Thiruvananthapuram

ARCHANA S NAIR

Date: 22/11/2017

Certificate that he has carried out all procedures mentioned etc.

Place: Thiruvananthapuram

Head of the Department of Anaesthesiology

Date: 22/11/2017

Sree Chitra Thirunal Institute for Medical

Science and Technology(SCTIMST),

Trivandrum

ACKNOWLEDGEMENT

First and foremost I would like to thank the Head of the Department of Anesthesiology Prof. **DR. RUPA SREEDHAR** and all other faculty members of the Anaesthesia Department who guided, encouraged, and helped me in all aspect of my training.

I thank the Director of this Institute **DR. ASHA KISHORE**, Dean **DR. KALYANA KRISHNAN** and Registrar **DR. A.V. GEORGE** for their valuable advice and help.

I would like to express my gratitude to **MR. KORUTH P. VARGHESE**, Head of the Department of Clinical Engineering for his precious advice, which helped me for the successful completion of the course. I am also thankful to all other faculty members of Clinical Engineering Department who helped and encouraged me to learn technical aspects.

I am also expressing my sincere thanks to the Central sterilization supply department (CSSD) **Supervisor** for her valuable guidance.

I extend my heartfelt thanks to all technical staff, especially Scientific Assistant **MR. BINU THOMAS** for their guidance. And I am grateful to all the Senior Residents of the Department of Anaesthesia.

I am also thankful to all my friends who helped me during my study in the Institute.

I would like to acknowledge my sincere thanks to my seniors and juniors for their co-operation in the work places.

ARCHANA S NAIR

SREE CHITRA TIRUNAL INSTITUTE FOR MEDICAL SCIENCE AND TECHNOLOGY

TRIVANDRUM, KERALA, INDIA

Originally established by the Government of Kerala as advanced Centre for medical specialties, Sree Chitra Tirunal Institute for Medical Sciences and Technology SCTIMST metamorphosed into an Institute of National Importance with the status of a University in 1980 under the Department of Science and Technology, Govt of India by an Act of Parliament Act 52 of 1980.

The joint culture of medicine and technology that the Institute pioneered more than three decades ago has come of age and gained unprecedented acceptance in India. Imbued with an inclination to venture into less-trodden domain, the Institute focuses on patient care of high quality, technology development of industrial significance and health research studies of social relevance.

The emphasis is on development of facilities less readily available elsewhere in the country such as Interventional Radiology, Cardiac Electrophysiology, Presurgical evaluation and Surgery of Epilepsy, Microsurgery and Deep Brain Stimulation for Movement Disorders, New Biomedical Devices and Products, Evaluation of Medical Devices to Global specifications, New Academic Programs and Global public health networks.

The Institute has three wings – Hospital, Biomedical Technology Wing and the Achutha Menon Centre for Health Science Studies. Excellent research and teaching are available at these centres.

This uniquely poised Institute has dedicated team of Clinicians. Scientists and Engineers devoted to high quality biomedical research and developing technologies in health care with emphasis on Cardiovascular and Neurological diseases.

THE COURSE

Diploma in Operation Theatre Technology (DOTT) started in the Institute in the year 1992 under the great vision of Dr. Mohandas, the former Director of this Institute.

This course enables the students in the operation and maintenance of a variety of medical and electronic equipment, which are used in operation theatre for monitoring during surgery and anaesthesia. The safety of patients depends largely on the reliable and smooth functioning of these equipments. The course is designed to train candidates in the operation and maintenance of theatre equipment and hospital pipeline systems.

EDUCATIONAL QUALIFICATION

A Diploma in Electronics/Instrumentation/Biomedical Engineering with good academic record.

DURATION

Two calendar years.

ADMISION

Through Common Entrance Test and Interview

SYLLABUS

COURSE CONTENTS

- Basic Anatomy and Physiology of Human Body
- Drugs used in Anaesthesia, Basic Pharmacology
- Principles of Anaesthesia and Intra Operative care of the patient
- Equipments used in Anaesthesia, its basic working principles, uses, troubleshooting, and maintenance
- Monitoring Equipments
- Principles and Techniques of Sterilization
- Transfusions and Infusions
- Medical gases and the Hospital pipeline system including vacuum suction.

OPERATION THEATRE TRAINING – 15 MONTHS

- ❖ Preparation of Anaesthesia machines, Ventilators, and other equipments used in Anaesthesia and Monitoring, Electro Cautery, Operating Microscopes, Operation Tables and Lights,
- ❖ Preparation of drugs used intra operatively and the setting up of intravenous infusion/transfusion.
- ❖ Sterilization of the equipment used in anaesthesia such as ventilator tubing, transducer, tracheal intubating equipments, trans esophageal echocardiography probe, fiberoptic bronchoscopy.
- ❖ Maintenance of theatre equipments, gas and vacuum outlets, theatre lights and cables etc.
- ❖ Managerial aspects such as stock maintenance, preparation of indents, and maintenance of the narcotic drug register etc.
- ❖ Hospital pipeline systems and gas manifold including compressed air and vacuum
- ❖ Positioning of patients for epidural, caudal, and para-vertebral blocks.
- ❖ Positioning of patients (supine, lateral, prone, and park-bench) for various types of surgery.
- ❖ Being an active team member during management of emergencies such as cardiac arrest.

CLINICAL ENGINEERING (SUB SET OF BIOMEDICAL ENGINEERING) TRAINING FOR 8 MONTHS (4 MONTHS DURING EACH YEAR OF COURSE)

During this period faculty of the Clinical Engineering Division trained me in the maintenance of theatre equipments, hospital pipeline systems, gas manifolds, vacuum outlets, theatre lights, and electro cautery.

CENTRAL STERILISATION AND SUPPLY DEPARTMENT- 1 MONTH

Posting under the Nursing Supervisor of this department for training in all aspects of sterilization of equipments including surgical instruments used in operation theatre

CALL DUTY

24 hrs call duty

CALL DUTY TAKEN DURING COURSE PERIOD

March 2016	-	13, 19, 23, 26, 26, 31
April 2016	-	05, 08, 11, 13, 15, 17, 23, 29
May 2016	-	03, 08, 12, 15, 26, 28, 30
June 2016	-	02, 07, 13, 18, 24, 27
July 2016	-	03, 12, 14, 18, 22, 24
August 2016	-	01, 03, 05, 10, 12, 15, 25, 28
September 2016	-	02, 06, 10, 15, 18, 21, 28
October 2016	-	01, 07, 09, 12, 15, 21, 29
November 2016	-	05, 11, 13, 19, 22, 24, 27
December 2016	-	02, 04, 09, 12, 14, 21, 31
January 2017	-	08, 13, 16, 18, 20, 22, 24, 26, 28, 30
February 2017	-	02, 05, 06, 10, 13, 19, 27
March 2017	-	01, 06, 12, 14, 20, 27
April 2017	-	01, 08, 13, 15, 21, 24, 29
May 2017	-	01, 04, 08, 11, 16, 22, 27
June 2017	-	05, 15, 19, 22, 24, 29
July 2017	-	07, 09, 11, 14, 17, 21, 24, 28, 30
August 2017	-	04, 07, 12, 15, 18, 24, 28, 30, 31

September 2017	-	03, 05, 10, 15, 16, 21, 23, 29
October 2017	-	01, 03, 05, 09, 12, 14, 20, 24, 28
November 2017	-	02, 04, 07, 09
December 2017	-	06, 10, 15, 19, 21, 26

OUR CLASSES

DR. PRASANTHA KUMAR DASH

Types of Anesthesia, Components of Anaesthesia and History of Anaesthesia

DR. BALAJI

Introduction to Human Anatomy

DR. BIMAL KUMAR SAHOO

Introduction to Physiology

DR. GOUTHAM

Detailed description about WBC- Total Count, Different Count and Functions

Platelets formation and Normal Level and Function

Blood group and Rh factor

DR. GARRI SANDEEP

Physiology of Heart

DR. BHAVANA

Gas Exchange

DR. UNNI KRISHNAN

Physiology of Central Nervous System

DR. PRASANTH P BHASKAR

Physiology of other systems

DR. CHENNA KESAVALLU

Introduction to Pathology

MR. BINU THOMAS

Sterilization and Decontamination

DR. KAREN RUBY LIONEL

Surgical Infection

DR. MANIKANDAN

Medical Gas Supply

MR. BINU THOMAS

Anaesthesia Machine and Vaporizer

DR. MANJUSHA PILLAI

Intra Arterial Blood Pressure, CVP, PA pressure, LA pressure, Cardiac Output – methods,
Normal Values

DR. KIRUBANAND

Preanaesthesia preparation and orders

History of previous anaesthesia and surgical exposure

DR. MUTHU KUMAR

Checking the Anaesthesia Machine, O₂, N₂O, Suction Apparatus, Laryngoscope, ET Tube,
Airways

DR. CHANDNI MAHESWARI

Intraoperative Anaesthesia management

DR. NANDISH KORI

Anaesthesia Medications and Post Operative Analgesia

DR. AJAY PRASAD HRISHI

Equipments and Drugs for Resuscitation, Defibrillator, Emergency Drugs

DR. PRASANTHA KUMAR DASH

Difficult Intubation, Blood Transfusion, cardiac arrhythmias

DR. MANIKANDAN S

Positioning in Neurosurgery

DR. SMITA

Air Embolism in Neurosurgery and Management

DR. ASHA

Anaesthesia for TEVAR,

Valve Repair and Replacement

DR.KAREN RUBY LIONEL

Posterior Fossa Surgery

DR. PRASANTH P BHASKAR

Central Venous Catheterization

DR. GARRI SANDEEP

Cardio Pulmonary Bypass

DR. CHENNA KESAVALLU

Anaesthesia Induction in Pediatric Patients

DR. ANKUR JOSHY

One Lung Ventilation

DR. AJAY PRASAD HRISHI

Anaesthesia for Intracranial Aneurysm

DR. RANGANATHA PRAVEEN

Anaesthesia for Spine Surgery

DR. NAYANA NEMANI

Preparation and Dilution of Vasoactive Drugs

DR. SWAPNA SASIDHARAN

Pulmonary Artery Catheterization and Cardiac Output Monitoring

DR. NANDISH KORI

Ruptured Abdominal Aortic Aneurysm

DR. SUBIN SUKESAN

Coronary Artery Bypass Grafting

DR. UNNI KRISHNAN

Intracranial Arteriovenous Malformation

DR. BIMAL KUMAR SAHOO

Ventriculo Peritoneal Surgery

DR. PRASANTHA KUMAR DASH

Tetralogy of Fallot Repair

Glenn Operation and TCPC

DR. NISHA

Lumbar Puncture and CSF Drainage and ICP Monitoring

DR. ANKUR JOSHY

Carotid End Arteriotomy

DR. GOUTHAM

Intracranial Tumor Decompression

DR. SOURABH SARMA

Percutaneous Tracheostomy

DR. MANIKANDAN S

Fiberoptic Bronchoscopy

DR. CHENNA KESAVALLU

Intra Aortic Ballon Counter Pulsation

DR. NIBEDITA SAHOO

Setting up of Ventilator In ICU

DR. SHRINIVAS V G

Congenital Heart Diseases

DR. SHILPA

Anaesthesia for Obstructive Surgery

DR. SASHMITHA

Endotracheal Intubation

DR. SONIYA

Bag Mask Ventilation, Intravenous Line Placement

DR. PRACHI

ENT Surgeries

DR. UNNI KRISHNAN

Anaesthesia Machine Checked

ANAESTHESIA: A GIFT TO MANKIND

INTRODUCTION TO ANAESTHESIA

The term anaesthesia is a Greek derived noun used to define state of insensibility or loss of sensation with or without loss of consciousness. Dr. Oliver Wendell Holmes coined the term 'Anaesthesia' in 1846.

DEFINITION OF ANAESTHESIA

Anaesthesia may be defined as a state in which as a result of drug induced unconsciousness, Noxious stimuli can neither be perceived nor recalled.

TYPES OF ANAESTHESIA

The main classification of anaesthesia includes General Anaesthesia (GA) and Regional Anaesthesia (RA).

REGIONAL ANAESTHESIA

It includes the loss of sensation of a particular region without loss of consciousness. The major type of Regional Anaesthesia includes:

1. Epidural Anaesthesia
2. Spinal Anaesthesia
3. Nerve Blocks
4. Caudal etc.

GENERAL ANAESTHESIA

It involves the loss of sensation of pain with loss of consciousness. Four major components of General Anaesthesia include:

- ❖ Hypnosis
- ❖ Analgesia
- ❖ Amnesia
- ❖ Muscle Relaxation

How The Patient Get Anaesthetized...A Simple Outline

One entering the blood stream the anaesthetic drug circulates to all organs of the body. The ultimate aim of the drug is to affect the Central Nervous System, which is fortunately the most richly perfused area of our body and rich fat content so that soluble anaesthetic drugs dissolve readily to produce the expected result.

In the case of inhalation anaesthetics that are absorbed to the blood stream through alveolar membrane (as long partial pressure of anaesthetic in lung is greater than that in blood) is carried to the tissues and get absorbed and in turn remain under low tension than the blood. When administration of drug is stopped the process gets reversed. Liver is the second to absorb more quantity of drug (first being brain) and the muscles absorb only a little due to the low proportion of fat.

The gases are transported as simple solutions in blood without forming compounds with haemoglobin. The gases with relatively low solubility provide anaesthesia quickly than those with high solubility.

The highest areas are the first to be loose their function, including unconsciousness. At this point the subconscious mind may give rise to unconscious struggling. This level of cerebral activity is next abolished leading to suppression of reflex response to stimuli. At first, coordinated reflex movements are abolished, and then muscle contraction is response to, first, stimulation of the comparatively intensive structures and second stimulation of sensitive of the body.

THE WORKING TEAM

MEMBERS

- ❖ Surgeon and Assistant
- ❖ Anesthesiologist and Technician
- ❖ Scrub Nurse and Field nurse
- ❖ Perfusionist
- ❖ Helper
- ❖ Cleaner

ANAESTHESIA TECHNICIAN

Anaesthesia Technician assists anaesthesiologist and prepares operating theatre for anaesthesia procedure.

DUTIES AND RESPONSIBILITIES

- ❖ Be responsible for setting up the anaesthesia machines, breathing circuits, infusion pumps, warming equipments, airway accessories, patient monitors, suction, other disposable and reusable items that might be required in each operating room. This also includes maintenance of standardized anaesthesia carts to assure that appropriate drugs and supplies are available for use by the anaesthesia team.
- ❖ Make sure that equipments and consumables are maintained in ready to use condition.
- ❖ Set up intravenous lines, pressure lines, special catheters including central venous catheter, arterial, pulmonary artery catheters.
- ❖ Administer Intra fluids and basic anaesthetic agents to patients under supervision of anaesthesiologist.
- ❖ Taking care of the patient and monitoring their vital signs before, during, and after the surgical procedure.
- ❖ Be available and responds to emergencies, and provide essential anaesthesia equipment, drug, assistance as per requirement. This requires a careful and thoughtful response to a wide variety of emergency situations.
- ❖ Remove all special and reusable materials after the case, decontaminate and sterilize as per recommendation, be responsible for cleaning in accordance with infection control policies for prevention of disease transmission.
- ❖ Perform point of care tests in operating room such as arterial blood gas, blood sugar, and Activated Clotting Time tests.
- ❖ Taking blood samples.
- ❖ Have full knowledge of anaesthesia, monitoring, and point of care equipments.
- ❖ In concurrence with anaesthetist keep ready all drugs, monitors, disposables, and equipments that are needed for anaesthetizing a particular patient.
- ❖ Make sure that emergency drugs such as atropine, vasopressors, adrenalin, bronchodilator and cortico-steroids are available on the emergency drug cart.
- ❖ Keep the anaesthesia machine worktop very clean and tidy.
- ❖ Make sure that essential equipments such as laryngoscope, endotracheal tube, connectors, catheter mount, malleable endotracheal tube introducer (stylet), etc. are chosen properly and kept in order on the machine worktop.
- ❖ Acquire technical knowledge about the working of the machinics and the other accessories and monitors that are used in theatre.
- ❖ The anaesthesia machine must be handled with adequate care and maintained carefully so that at all times it functions perfectly.
- ❖ Providing assistance during induction of anaesthesia, intubation of trachea, securing the endotracheal tube, positioning the patient, clearing the oro-tracheal secretions, emergence from anaesthesia, extubation of trachea, and shifting the patient from operation theatre to intensive care unit.

SKILLS

- ❖ Have good communication skills
- ❖ Technical and analytic skill
- ❖ Observation and crisis management skills
- ❖ Computer knowledge
- ❖ Good team player skills.
- ❖ Cardio-pulmonary resuscitation skills.

KNOWLEDGE

- ❖ Acquired thorough knowledge of procedures and protocols in the operation theatre.
- ❖ Knowledge of advances in anaesthesia, emergency drugs, monitoring and anaesthesia equipment.
- ❖ Learned to identify medical conditions such as adverse drug reaction and became aware of likely consequences and treatment required in these situations.

PERSONAL QUALITIES ACQUIRED

- ❖ Became aware and developed understanding for a range of different cultures
- ❖ Learned the need to be calm during emergencies.
- ❖ Learned to work and take decisions under pressure
- ❖ Learned to be organized, precise and practical

WORK PLACE

- ❖ Adult Cardiac Surgery Operation Theatre
- ❖ Paediatric Cardiac Surgery Operation Theatre
- ❖ Neuro Surgery Operation Theatre
- ❖ Cardiac Surgery Intensive Care Unit
- ❖ Neuro Surgery Intensive Care Unit
- ❖ Congenital Heart Surgery Intensive Care Unit
- ❖ Neuro Medical Intensive Care Unit
- ❖ Cardiac Cath Lab
- ❖ Electro Physiology Lab
- ❖ Digital Subtraction Angiography (DSA) Lab
- ❖ Magnetic Resonance Imaging (MRI) induction room and console
- ❖ Computed Tomography (CT) room

EQUIPMENTS INCLUDE

- ❖ Anaesthesia machine
- ❖ Syringe pumps
- ❖ Gas monitor
- ❖ Multi parameter monitor
- ❖ Ventilators (Maquet Servo i, Maquet Servo s, Drager)
- ❖ Video laryngoscope
- ❖ Fibre optic bronchoscope
- ❖ Anbu scope
- ❖ Pentax
- ❖ Intubating laryngeal mask airway
- ❖ Patient Warmer
- ❖ Echo machine
- ❖ Ultrasound machine
- ❖ Activated Clotting Time machine
- ❖ Arterial Blood Gas machine
- ❖ Intra-aortic balloon pump
- ❖ Evo potential monitor
- ❖ Bispectral index monitor
- ❖ Entropy monitor
- ❖ Peripheral Nerve Stimulator
- ❖ Cardiac Output monitor

EVERY DAY AT THE START OF THE WORK HE MUST DO THE FOLLOWING.

- ❖ Check the functioning of the machine with a protocol.
- ❖ Checked the laryngoscope and accessories such as spare blades and bulbs.
- ❖ Check the endotracheal tube and their connections.
- ❖ Check the breathing system for integrity of the components and check for leaks particularly from the reservoir bags.
- ❖ Check the content of the cylinders attached to the machine.

PREPARATION OF OPERATION THEATRES FOR GENERAL ANESTHESIA

- ❖ Check the case list to get an idea of time of surgery, theater number, patient name, age, sex, weight, blood group, diagnosis, procedure etc.
- ❖ Before entering to operation theatre wash the hand with soap solution- betadine and then with running pipe water.
- ❖ Connect all gas lines to the wall points, check the central line pressure and cylinder pressure (attach to the anesthesia machine).
- ❖ Make the electrical connection for ventilator, monitor, suction, defibrillator, and other equipments.

PREPARATION OF AIRWAY MAINTENANCE EQUIPMENTS

- ❖ Check the gas pressure gauge for adequate line pressure.
- ❖ Check the backup gas cylinders and be sure that they are adequately filled.
- ❖ Check that the vaporizers are filled.
- ❖ Switch ON the anaesthesia machine.
- ❖ Check for the gas flow by rotating the knobs for each gas individually.
- ❖ Check that the anaesthesia workstation safety mechanism are intact.
- ❖ Turn OFF the flows after each check.
- ❖ Connect the patient circuit (Adult or Paediatric).
- ❖ Make the ventilator setting for tidal volume, respiratory rate, Inspiratory:Expiratory ratio, alarm setting etc.
- ❖ Perform leak test for the circuit.

HOW TO CHECK THE ANAESTHESIA MACHINE

- Go to service Mode
- Select “Test for Leak”
- Set Bag/Vent switch to vent position.
- Set fresh gas flow to minimum.
- Open patient “Y” connection to atmosphere
- Set flow valve to 12L/min.
- Verify that the bellows is completely collapsed.
- Slowly increase fresh gas flow until pressure gauge reads 30cmH₂O.
- Leak rate is the fresh gas flow needed to maintain 30cmH₂O.

PREPARATION OF INDUCTION TROLLEY

- Check for appropriate size of oxygen mask.
- Check all size of Anaesthesia Masks.
- Airways.
- Laryngoscope Blades.
- Mouth probe.
- Magill’s Forceps.
- Check that the laryngoscope is working.
- Check weather appropriate sizes of endotracheal tubes (ETT)/double lumen tubes (DLT), Ryle’s tube is available.
- Check for availability of Cuff pressure gauge, Magill’s forceps, Stylets, Bougies, Nasal Drops, Eye drops, Jelly, Betadine, Spirit, Benzoin, Cotton, Stethoscope, Gauze, Plasters for ETT fixation and Suction catheters.
- Check the working suction apparatus.

PREPARATION OF ANAESTHESIA TROLLEY

- Check for dressing tray, anaesthesia tray, empty tray etc.
- Open the empty tray and prepare the syringes for drugs and label them.
- Set the IV infusion (RL/Dextrose/Isolate-P) with ordinary IV set/ Volume set/ Micro drip set, or Syringe pump. Attach extension and de-air the line.
- Prepare continues flushing solution in NS with Heparin 1 unit/ 1ml and label it.
- Prepare Transducers for central venous pressure (CVP), and arterial pressure monitoring.
- Load the drugs based on patient age, weight, physiological conditions and case. Check IV cannula, Arterial cannula, Guide wire, Extensions, Three ways, CVP cannula, and Catheters (Triple lumen, double lumen, pulmonary artery(PA) catheter, thermo dilution catheter, etc.), emergency drugs, ampoules breaking files, fixation plasters, blade, sutures etc.

PREPARATION OF MONITORS

- Check monitor accessories (modules, probes, transducers, non-invasive blood pressure(NIBP) cuff, peripheral nerve stimulator(PNS), electrodes).
- Attach electro cardio gram (ECG) electrodes to the ECG cables.
- Attach gas monitor probe (ETCO₂/sample lines).
- Connect the transducer and zero it.

MISCELLANEOUS PREPARATION

- Check theatre light and table.
- Defibrillator, ACT machine (with pre-warmed cartridge), thromboelastography (TEG) machine, trans esophageal echo (TEE) machine, ultrasound machine.
- Syringe pump, Glucometer, Pressure Bag.
- Bronchoscope with light source for thoracic cases.
- Fluid warmer, patient warmer sheet, arm rests, belts straps, pillows and water bag for positioning.

SPECIAL CASES

- For prone position, keep flexometallic ET tubes.
- For thoracic cases keep Double Lumen Tubes, Bronchoscope and Epidural set.
- For awake craniotomy, stereotactic biopsy etc., keep Laryngeal Mask Airway (LMA), Succinylcholine.
- Sizer tube for pediatric case.
- Atracurium for patient with renal failure and Myasthenia Gravis.
- Use MRI compatible equipments for MRI cases.
- For radiological procedures, be sure that emergency drugs, airway devices, including LMA, patient circuit etc. are available.

ASSISTING THE CASE

- Identify the patient and shift to theatre.
- Make sure that antibiotics are shifted together with the patient.
- Position the patient.
- Attach the monitors.
- Put oxygen mask for pre-oxygenation.
- Help for IV lines.
- Help for arterial line.
- Prepare for mask ventilation.
- Assist for intubation and tube fixation.
- Turn ON the ventilator.
- Assist for introducing nasogastric tube.
- Help for CVP line, positioning, preparation.
- Connect transducer for CVP line, zero and optimize the scale.
- Help in positioning for surgery and take care of lines, and secure the patient.
- Check arterial blood gas (ABG) and check the blood sugar.

DURING THE SUGERY

- Get cardioplegia, heparin and infusion pumps.
- Check that sufficient blood and blood products are available.
- Once ABG result are obtained, deliver it to the anaesthetist.
- Help in loading drug infusions, help in monitoring the patient.
- Fill the charge accounts sheet in case of chargeable items are used (Triple lumen, PA catheter, cartridge for ACT, TEG, DLT, and Epidural set).
- Fill the narcotic drug register and get it signed from the anaesthetist.
- Collect intensive care unit (ICU) intimation chart and hand over to ICU.
- Before shifting check that documentation is complete and that anaesthesia chart, charge account sheets, ABG reports, X rays, blood products, Transfusion reaction form, and Antibiotics etc. are transferred from OT to ICU.
- Check the self-inflating bag is available for shifting. Secure all the lines and commence monitoring using transport monitor.
- Take care of the lines, syringe pumps and other infusions and shift the power cords of the pumps, transducers etc.
- While shifting to ICU assist in ventilating the patient in case patient's trachea is not extubated.
